

JOB POSTING #GeologyTech

GEOLOGY TECHNICIAN

Premium Nickel Resources Botswana (PNRB) is seeking a Geology Technician. Reporting to the Project Geologist, the Geology Technician is part of the Geology Department and collaborates with other departments of the mine. The incumbent will play an important role in terms of diamond drill core preparation, MagSus and Conductivity Measurements, Core sampling and preparations. An important involvement with the geological procedures and QA/QC sampling procedures is considered key to this role.

Specific responsibilities include:

- Ensuring that COVID-19 protocols are followed
- Managing contractors and ensures that time sheets are verified
- Report or address any irregularities revolving around diamond drill core (Recovery etc)
- Rotate and align drill core, collect and record RQD measurements, capture and record MagSus and Conductivity measurements
- Rotate and mark Bottom of Hole line when dealing with Oriented Core.
- Attend and participate in the Safety and Geology meetings

Qualifications:

- Knowledge of the principles and methods used in a preparation of diamond drill core in addition to oriented core
- Previous Experience (Geological and Structural) with drill core would be considered an asset
- Ability to communicate effectively, both written and verbal, with various individuals, crews, departments and organizational levels. This position requires proficiency in both written and spoken English. You will be expected to be a skilled communicator and be result-oriented, flexible and capable of working independently and as part of a team, with the aim of contributing to the company's development.
- Familiar with Microsoft Office Suite

How to Apply:

- Email resumes and credentials to careers@premiumnickel.com
